GSEA protein foldingribosome biogenesisresponse to topologically incorrect proteinregulation of ubiquitin-dependent protein catabolic processribonucleoprotein complex biogenesisrRNA processingmRNA processingregulation of proteolysis involved in cellular protein catabolic processregulation of proteasomal protein catabolic processregulation of mRNA processingproteasome-mediated ubiquitin-dependent protein catabolic processnegative regulation of proteolysisextrinsic apoptotic signaling pathwayintrinsic apoptotic signaling pathwayresponse to oxidative stressregulation of cellular protein catabolic processmRNA metabolic process-RNA splicing-RNA splicing, via transesterification reactions-RNA splicing, via transesterification reactions with bulged adenosine as nucleophilemRNA splicing, via spliceosomeprotein stabilization apoptotic signaling pathwayregulation of mRNA metabolic processcellular response to steroid hormone stimulusnuclear exportprotein export from nucleusregulation of intrinsic apoptotic signaling pathwayproteasomal protein catabolic processregulation of protein catabolic processcofactor biosynthetic processrRNA metabolic processresponse to reactive oxygen speciespositive regulation of apoptotic signaling pathwayregulation of cellular catabolic processmodification-dependent protein catabolic process-RNA localization ubiquitin-dependent protein catabolic processregulation of proteolysismodification-dependent macromolecule catabolic processregulation of protein ubiquitinationregulation of protein modification by small protein conjugation or removalregulation of neuron deathnegative regulation of apoptotic signaling pathwaycellular response to oxidative stresspositive regulation of protein catabolic processnucleic acid transport-RNA transportpositive regulation of cellular catabolic processnegative regulation of neuron deathregulation of neuron apoptotic processnegative regulation of catalytic activitynegative regulation of protein modification processestablishment of RNA localization regulation of RNA splicingnegative regulation of phosphorylationcofactor metabolic processcellular response to hormone stimulusregulation of apoptotic signaling pathwayregulation of protein stabilitypositive regulation of catabolic processnegative regulation of transferase activitynegative regulation of establishment of protein localizationnegative regulation of protein phosphorylationresponse to hormoneresponse to steroid hormonepositive regulation of establishment of protein localizationncRNA processinghormone-mediated signaling pathwaysteroid metabolic processregulation of establishment of protein localizationneuron death nucleocytoplasmic transportsigned_enrichment 2.4 nuclear transport-2.1 1.8 response to toxic substance-1.5 positive regulation of programmed cell deathminusLog10Pval sex differentiation telomere maintenanceproteolysis involved in cellular protein catabolic processcellular nitrogen compound catabolic processtelomere organization neuron apoptotic processorganic cyclic compound catabolic processpositive regulation of apoptotic processreproductive structure developmentpositive regulation of cell deathpositive regulation of DNA metabolic processheterocycle catabolic processresponse to lipidregulation of endopeptidase activityregulation of cysteine-type endopeptidase activity involved in apoptotic processorganic hydroxy compound metabolic processnegative regulation of phosphorus metabolic processnegative regulation of phosphate metabolic processleukocyte mediated immunitysmall molecule biosynthetic processnegative regulation of kinase activityreproductive system developmentprotein localization to nucleuspositive regulation of peptide secretion-DNA biosynthetic processmitochondrion organization aromatic compound catabolic processnegative regulation of catabolic processpositive regulation of protein secretionestablishment of protein localization to organelleribonucleoprotein complex subunit organizationcircadian rhythmribonucleoprotein complex assemblyregulation of intracellular transportalpha-amino acid metabolic processnegative regulation of MAPK cascadecarboxylic acid biosynthetic processpositive regulation of DNA-binding transcription factor activitymacroautophagynucleobase-containing compound transportprotein importorganic acid biosynthetic processautophagyprocess utilizing autophagic mechanismnucleobase-containing compound catabolic processresponse to starvation protein import into nucleusnegative regulation of protein kinase activityreactive oxygen species metabolic processactivation of immune responselipid biosynthetic processregulation of intracellular protein transportregulation of cytokine productionresponse to radiation regulation of cellular response to stressimport into nucleusnegative regulation of hydrolase activitynegative regulation of cellular catabolic processresponse to organic cyclic compoundregulation of DNA-binding transcription factor activityregulation of DNA metabolic processregulation of peptidase activityncRNA metabolic process-RNA catabolic processcytokine production cell growthregulation of cellular protein localizationregulation of peptide transportpositive regulation of protein transportcellular response to lipiddevelopmental process involved in reproductionregulation of protein transportcarboxylic acid metabolic processnegative regulation of intracellular signal transduction-C2C12 Tissue/condition
